DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-12, drawn to a network structure for managing networked USB devices, classified in class 709, subclass 223.
- II. Claims 13-15, 18, 19-21, 24, 25-27, and 30 drawn to encapsulation of packet level network communications, classified in class 709, subclass 232.
- III. Claims 16-17, 22-23, 28-29 are drawn to two way communications for managing and processing a reply from USB devices, classified in class 709, subclass 227.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims in group II do not require the specifics of group I. The subcombination has separate utility for private transmission of object data within a packet over a network such as in tunneling or wrapping.

Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2153

case, the combination as claimed does not require the particulars of the subcombination as claimed because claims in group III do not require the specifics of group I. The subcombination has separate utility such as managing and processing of replies for devices connected to a network.

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as for private transmission of object data within a packet over a network such as in tunneling or wrapping. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Furthermore, because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.
